Education

Indian Institute of Technology Roorkee

Bachelor of Technology

November 2021 - May 2025

Roorkee, Uttarakhand

Experience

The Souled Store

July 2025 - Present

Associate Software Development Engineer

Onsite

- Consolidated order-management backend into 1 unified service, merging cart, order creation & invoicing, and decommissioning 3 legacy services.
- Built store-side quick-delivery (hyperlocal) fulfillment system end to end, scaled to 25 active stores with full ops tooling.
- Migrated product stock retrieval to a dedicated table across 5 services, a foundational data model change improving stock accuracy across the platform.
- Replaced WebSocket with Server-Sent Events (SSE) over Redis pub/sub for a real-time in-store notification system, serving 180 concurrent users across 60 retail locations.
- Migrated async order-status sync to a message-queue-based system, adding retry with backoff and failure alerting for zero silent drops.
- Built a purchase-event pipeline covering the full order lifecycle (purchase to returns) for 40K+ orders during peak sale, using Redis to batch line-item-level cancellation and return events into single API calls.
- Sole owner of the point-of-sale platform, handling development, testing, and maintenance from design through production support.

Kipps.AI

February 2025 - March 2025

Full Stack Developer Intern

Remote

- Reduced chatbot response latency and enabled reply streaming via SSE for smoother conversational flow.
- Integrated OpenAI function calling to execute backend operations from AI-generated commands.
- Built a real-time dashboard to monitor chatbot engagement and analyze WhatsApp messaging trends.

Madpackers

July 2024 - September 2024

Full Stack Developer Intern

Remote

- Engineered a travel forum backend in TypeScript with OAuth 2.0 and JWT for secure session management.
- Integrated PMS with the backend, improving system efficiency by 25% for room availability and pricing.

Projects

Application Deployment Engine — Typescript, React, Node.js, Express, AWS S3, Redis

November 2024

- Automated deployments with a Deployment Service integrating AWS S3 and Redis for managing build queues.
- Devised a Request Handler Service using Express to efficiently serve static files (HTML, CSS, JS) from S3
- Created an Upload Service to clone Git repositories, upload files to S3, and track deployment statuses via Redis.
- Designed a modular architecture separating upload, deployment, and request handling for improved scalability

Image Generator — Typescript, React, Node.js, Express, MongoDB, Tailwind CSS

April 2024

- Engineered a full-stack web app with Tailwind CSS, integrating Cloudinary to efficiently manage images.
- Leveraged OpenAI DALL-E API, creatively generating images from user-provided textual prompts.
- Built search functionality by prompt and username, effectively supporting a community for users.

Technical Skills

Languages: C++, Python, SQL, JavaScript, TypeScript, HTML/CSS

Frameworks & Libraries: React, Node.js, Express.js, Django, Falcon, Celery

AI & Developer Tools: ChatGPT, Claude, Cursor, Antigravity, OpenAI API, Function Calling

Tools & Platforms: Git, GitHub, AWS, Redis, Netcore, Slack API, Vinculum

Architecture & Patterns: Microservices, Event-Driven Architecture, Pub/Sub, REST APIs, Webhook Processing, Modular Architecture
